

Introduction to Interactive Communication Editor

[!NOTE]

The Interactive Communication capability is available under the early-adopter program. Send an email from your work address to aem-forms-ea@adobe.com to request access.

[!IMPORTANT]

Documentation Subject to Change: This prompt library is currently being tested against the product and is subject to updates and revisions. Prompts, examples, and best practices may change as the Forms Experience Builder continues to evolve during the early-adopter program.

What is Interactive Communication Editor?

Interactive Communication (IC) Editor is an intuitive visual design environment within Adobe Experience Manager Forms. It enables organizations to create highly personalized, data-integrated communications in print format using a single authoring experience. These communications are often used for customer correspondence such as billing statements, policy documents, welcome kits, and investment summaries.

You can integrate components such as text, images, charts, tables, and barcodes, while binding each element to structured data sources. This dynamic binding ensures that communications are automatically tailored for every recipient.

Purpose and Use Cases

Common Use Cases Include:

- **Financial Services:** Generating dynamic account statements, investment summaries, and loan documents personalized by client data
- **Insurance:** Designing policy documents, claim summaries, or renewal notices with embedded charts and visuals
- **Healthcare:** Producing member health statements, lab reports, and benefits summaries
- **Utilities:** Creating monthly billing communications with charts and breakdowns
- **Government & Education:** Populating citizen notices, certificates, and personalized mailers
- **Human Resources:** Creating offer letters, onboarding kits, and employee communication documents

Key Features and Capabilities

Interactive Communication (IC) Editor is designed for efficiency, usability, and control. Its features empower authors to create visually appealing, personalized, and data-integrated communications.

Feature	Key Capabilities
---------	------------------

Feature	Key Capabilities
WYSIWYG Editor	- Pixel perfection for accurate rendering - Font styling controls - Flexible layout for professional design
Layout Control	- Positioning (absolute and flowed) - Easy drag-and-drop functionality - Use master pages to define consistent layouts
Components	- Access to newly introduced components, including tables, charts, and barcodes - Ready-to-use components for faster design
Data Binding	- Directly link components to data sources - Automatically prefill fields for personalized communication
Rule Editor	- Configure dynamic validations - Add calculations and conditional logic for interactivity
Fragment Library	- Create modular building blocks (headers, footers, disclaimers, icons) - Maintain consistency across multiple communications
Templates	- Ensure uniform branding and structure across communications

Onboarding

The Interactive Communication (IC) capability is available through the Early Access (EA) program. To request access, email aem-forms-ea@adobe.com from your official email ID with your Environment ID and Organization ID. Once Adobe confirms your enrollment, follow the [Onboard to the Service](#) documentation to enable Interactive Communication in your AEM Forms environment.
