[!DNL Adobe Experience Manager Assets] lets you import metadata forms and their associated folders from [!DNL Admin View] to [!DNL Assets View].

Before you begin

Ensure you have admin rights to import the metadata forms and their associated folders from [!DNL Admin View] to [!DNL Assets View].

Import metadata forms to [!DNL Assets View]

As an administrator, execute the following steps to import the metadata forms available in [!DNL Admin View] to [!DNL Assets View]:

1. Navigate to the [!DNL Assets View] home page and click **[!UICONTROL Metadata Forms]** under **[!UICONTROL Settings]** to open the **[!UICONTROL Metadata Forms]** page displaying the list of metadata forms available in [!DNL Assets View].

Metadata Forms

Metadata Forms

Sort by Name

	Name	Modified	Author	Preview
☐		May 1, 2025, 11:33 PM		
☐		Apr 30, 2025, 9:34 PM		
☐		May 28, 2024, 11:13 PM		
☐		Feb 28, 2025, 1:23 AM		
☐		Feb 19, 2025, 2:07 AM		
☐		Feb 28, 2025, 1:50 AM		
☐	erties	Jun 20, 2025, 2:38 PM		

2. Select **[!UICONTROL Import]**, a processing message displays (for example, *Processing 2 metadata forms ... Please wait.*) while the import is in progress. After the processing is complete, the **[!UICONTROL Import metadata forms]** table displays, which includes a list of metadata forms available in **[!DNL Admin View]**. The table row includes, metadata form name (under **[!UICONTROL Name]**), folders associated with that form (under **[!UICONTROL Folder Association]**) and an option to preview  the form before importing it.

Import metadata forms

Cancel

Start Import

Select the metadata forms you want to import. You can also preview and adjust the destination folders before proceeding with the import.

	Name	Folder Association		
☐	Duplicate	x		13 Issues
☐		x		0 Issues
☒	roper	x		14 Issues
☐				2 Issues
☐				0 Issues
☐				1 Issues
☐				9 Issues
☐				12 Issues

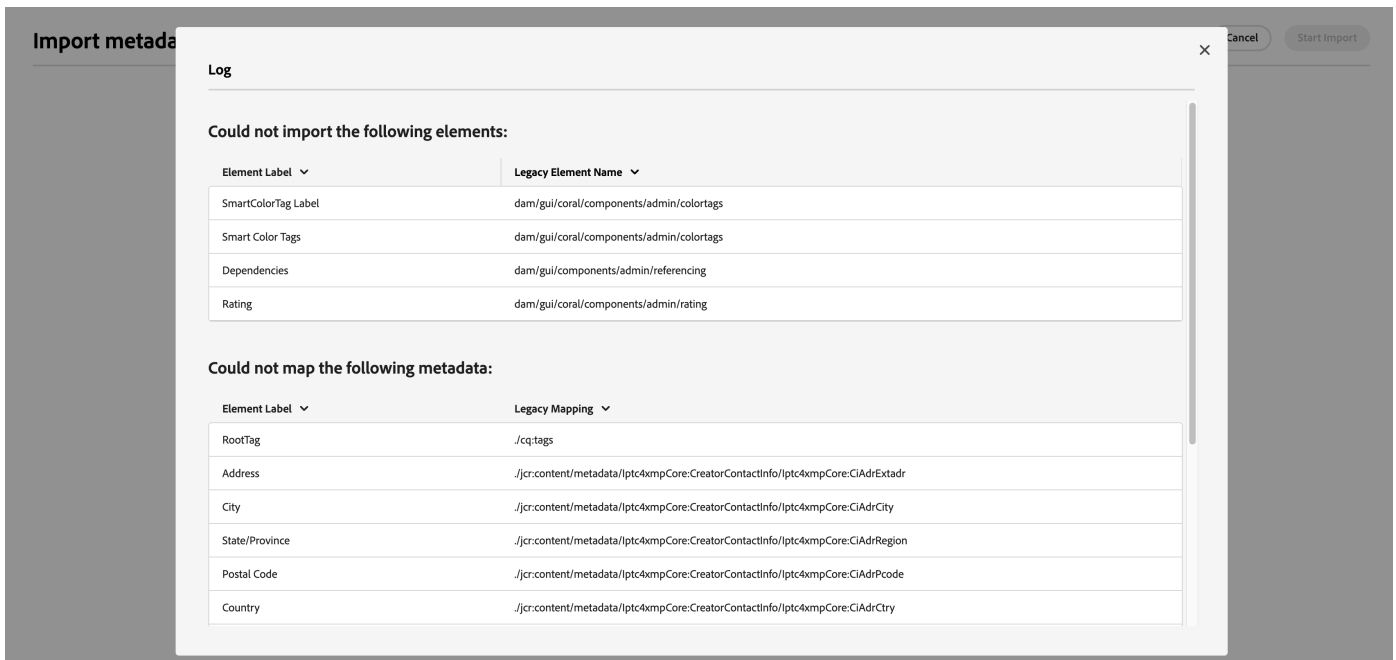

[!NOTE]

In the **[!UICONTROL Import Metadata Forms]**, table a **[!UICONTROL Duplicate]** label next to a form name shows that the form is already applied to a folder in **[!DNL Assets View]**. Importing that duplicate form overrides the existing one applied to the folder. To avoid this override, rename the form before importing it. Click the form name to rename it.

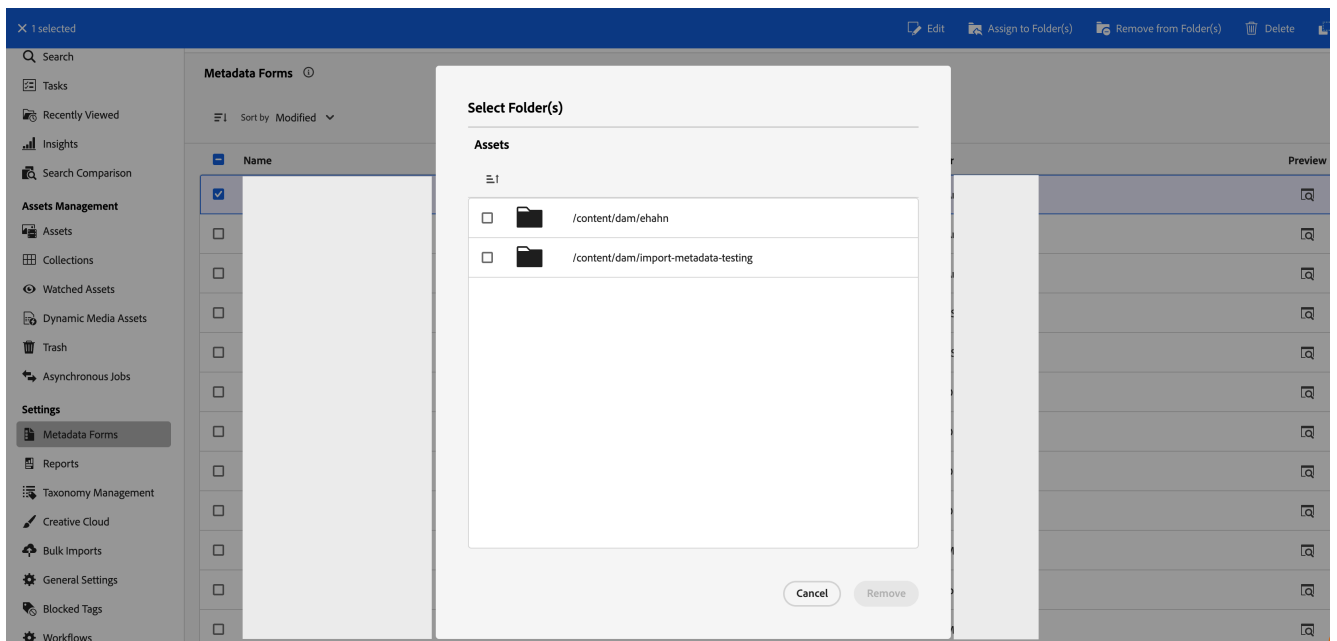

3. Click  next to a folder name (under **[!UICONTROL Folder Association]**) to remove the corresponding metadata form from that folder.
4. Click 

to select a folder to assign the corresponding metadata form to it.

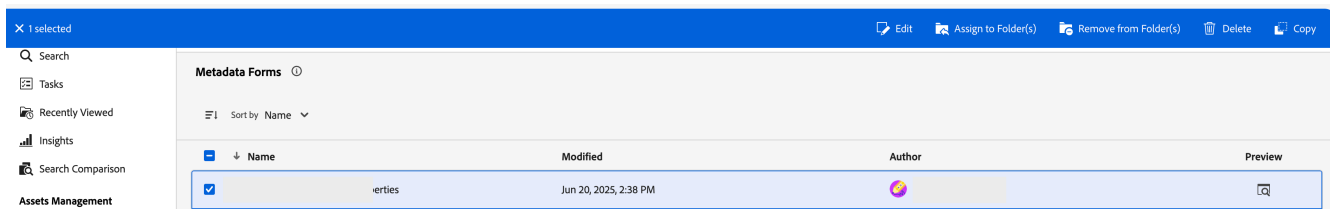

- Click the red circle to view details about unsupported metadata components or mappings in the form that are excluded from the import.

- Select one or more forms in the table and click **Start Import** to import the metadata forms and its associated folders into [!DNL Assets View]. A processing message displays (for example, *Importing 3 metadata forms. Please wait!*). Once the import is complete, a success message confirms that the forms are imported successfully and the **Metadata Forms** page (of [!DNL Assets View]) displays both recently imported and existing forms available in [!DNL Assets View]. You can do the following on this page:
 - Click the column header to sort the table by [!UICONTROL Name], [!UICONTROL Modified], or [!UICONTROL Author].
 - Select the imported form and click **Remove from folder(s)**, then verify the folder name in the folder path to confirm that the folder is correctly ported.

- Select the imported form and click **[UICONTROL Edit]** to view all the supported configurations of the metadata form. See [Setup Metadata Forms](#) for more information about the metadata forms, their components, and fields.

Verify the imported metadata forms

After importing the metadata forms from [\[!DNL Admin View\]](#) to [\[!DNL Assets View\]](#), follow these steps to verify the import:

1. Navigate to any of the associated folders of the imported metadata form.
2. Navigate to an [asset's details page](#) and verify that the supported metadata components, component fields, and field values are synced from [\[!DNL Admin View\]](#). See [Metadata in Assets Essentials](#) article for more information about metadata components, component fields, and the field values.

[!NOTE]

Any changes you make to the metadata fields in [\[!DNL Assets View\]](#) syncs back to the metadata form in [\[!DNL Admin View\]](#) in real-time. However, changes made to the metadata forms in [\[!DNL Admin View\]](#) are not synced to the metadata form in [\[!DNL Assets View\]](#).
